Subject: Revised ASPECT report
Attachments: Preliminary Report for ASPECT Hurricane Harvey v8.pdf

We incorporated some clarifying comments to yesterday's report.

Page 7 of 9: "2100 hrs: The manual ignition of the trailers was cancelled. Locals report that one of the trailers is leaking on its own. ASPECT confirmed smoke and made a chemical sweep directly over the trailers. Many chemical detections were made consistent with light hydrocarbons (e.g., 1,3-butadiene) caused by the heated constituents emitted from the trailers. These hydrocarbons were all measured slightly above the limit of detection (about 5 ppm). Other downwind passes (50 m to 100 m) did not show chemical detections above the detection limits. Figure 7 shows two infrared images from independent passes 30 minutes apart."

We are work planning flight ops for the day. Mark will update everyone shortly.
